

IN-CAN LINES

MADE-TO-ORDER SOLUTION

Dromont provides turn-key plants as well as all ancillary equipment including denesting, label printing and application, automatic lidding, robotic multiple mixing station, palletizer and the related software and hardware complete control system.

DECORATIVE AND INDUSTRIAL PAINT ON DEMAND

- Complete process from empty cans to finished goods
- Dromont produces dispensing machines that does all the components into empty cans and/or pails
- These containers also function as the final shipping container. This allows for rapid, low waste and low cost manufacturing of custom products without the need to carry finished goods inventory.
- This technology integrates complete handling lines including labeling, agitation and palletizing

Our e-Commerce integrated solutions for automated tinting, mixing and packing of pre-filled paint containers can address any size order for the DIY and PRO customers, for any color and in any size container from 5-gallon pails to 8 oz. sample pots.

Dromont's fully automated processes offer an extremely efficient means to address the diversity and growth of online or e-commerce orders and can be designed with customized levels of automation to address productivity demand. With this growing trend toward online orders for both DIY customers and professional contractors, paint suppliers need automated solutions providing flexibility and speed to address the breadth of order sizes, colors and containers

MAIN ADVANTAGES

- Rapid response to any online order on a 24/7 basis for DIY and PRO customers
- Small and fractionated orders made profitable
- Make to order process eliminates frozen capital of finished goods inventory guaranteeing a reduction in working capital
- Tailor-made configurations and increased customization
- Ideal for handling the complexity of any quantity, color, sheen or container size
- Automated processes reduce labor and increase throughput at a low cost
- Pail and sample jars prepared for shipment in less than 1 minute
- Lower cost of direct and indirect labor while maintaining speed, accuracy and traceability

TECHNICAL FEATURES

- Linked to customer's own order management and ERP system by a holistic approach
- Communicates all needed data from customer ERP to the machine for a complete order processing
- Automatic dispensing machine with AISI 304 patented dosing valve
- Automatic dispenser for simultaneous volumetric dispensing of colorants
- Automatic lid feeding and screwing station with a screwdriver with torque control and closing check
- In-line barcode label printer and applicator
- Mixing station with automatic fast pick and place arm
- Integrated logistic warehouse to release finished pails once the delivery truck arrives to the site
